

# NASA TECH BRIEF

NASA Tech Briefs announce new technology derived from the U.S. space program. They are issued to encourage commercial application. Tech Briefs are available on a subscription basis from the Clearinghouse for Federal Scientific and Technical Information, Springfield, Virginia 22151. Requests for individual copies or questions relating to the Tech Brief program may be directed to the Technology Utilization Division, NASA, Code UT, Washington, D.C. 20546.

## Volume-Checking Tool

The amount of fluid in a closed system of known or unknown volume can be determined with a novel volume-checking tool. Similarly the amount of gas entrained by fluid in a closed system, the amount of

fluid remaining in a dried system of known volume, or the volume of a container of unknown size can be determined.

The tool was developed for checking the contents of a closed-circuit, pressurized loop containing a

coolant mixture of water and methanol. During operation a certain amount of fluid leaked from the system, and small amounts of gas were generated by galvanic action within it. Since the volume of entrained gas could not exceed the allowable amount it was necessary to determine accurately (1) the original and final (after operation) fluid contents on which the leakage rate could be based, and (2) the rate of gas generation.

The tool consists of two modules (see fig.): a stand-pipe or graduated storage vessel, and a control panel. Its accuracy is limited to that of the off-the-shelf instruments incorporated. In one variation or another the tool is potentially widely applicable.
